Background

The lysine residue in proteins can undergo to many types of PTMs, such as methylation, acetylation, biotinylation, ubiquitination, ubiquitin-like modifications,propionylation and butyrylation, then leading to the remarkable complexity of PTM networks. Succinylation is a posttranslational modification (PTM) where a Succinyl group is added to a Lys (K) residue of a protein molecule .it has been shown that the lysine Succinylation responses to different physiological conditions and is evolutional conserved.
