Background

Proteasome Activity Fluorometric Assay Kit I is designed for assaying the proteasome's chymotrypsin-like activity in vitro using purified proteasome, cleared cell lysates or tissue extracts. The proteasome cleaves SUC-LLVY-AMC and the released AMC fluorescence can be monitored using a plate reader or fluorometer at the excitation/emission wavelength of 360nm/460nm, respectively.

Basic Information

Description

Bio-Activity

Storage

Store at -70°C. This product is stable at $\leq -70^{\circ}\text{C}$ for up to 1 year from the date of receipt. For optimal storage, aliquot into smaller quantities after centrifugation and store at recommended temperature. Avoid repeated freeze-thaw cycles. Avoid repeated freeze/thaw cycles.
